

Kiln Casting Workshop
With
Mark Abildgaard
At
Studio Artists Gallery

\$265 including all materials
Sept. 13, 14, 20, 21 (½ day)

Learn how to cast glass using an electric kiln! The purpose of this workshop will be to give participants a hands on experience that will allow them to cast solid glass objects on their own. We will cover mold making, kiln firing, and glass annealing. Participants will use clay to create a relief from which a mold will be made during the first day. The second day the molds will be loaded with glass for a kiln firing during the following week by the instructor. The final weekend participants will take their glass castings out of the molds and do minor cold working to finish their pieces.

No prior glass working experience is needed.
